**(54)ERRONEOUS INSERTION PREVENTING
DEVICE FOR CARD CONNECTOR**

(57)Abstract:

PROBLEM TO BE SOLVED: To prevent a card connector from becoming large in scale, and to prevent a function for preventing the erroneous insertion of a card from being easily damaged even when the erroneously inserted card is strongly inserted in an erroneous insertion preventing device of a card connector for preventing the erroneous insertion of the card.

SOLUTION: A card 1 having an inclined acting part 12 is defined as an object to be used. A detecting part 63 is provided at the rear edge of a movable piece part 62 extended from attached part 61. The detecting part 63 is provided with detecting board parts 65 and 66 widen toward the end, and working parts 67 and 68 formed of the rear edges of the detecting board part 65 and 66. The detecting part 63 is projected in a card inserting and pulling-out part, and allowed to go back to the lower side of the card inserting and

pulling-out path by deflection deformation against the elasticity of the movable 62. The working parts 67 and 68 are positioned at the passage of the acting part 12 of the card 1 to be inserted and pulled-out in a normal attitude for the card inserting and pulling-out path.
